

RCON Communication Protocol

Version 0.17.54

LAST UPDATE: October 31st 2024

This communication protocol is TCP/IP based and applies to the communication between RCON clients and The Isle Servers.

COMMUNICATION PROTOCOL

The most common use of RCON is to allow server owners to control their game servers without direct access to the machine the server is running on. In order for commands to be accepted, the connection must first be authenticated using the server's RCON password, which can be set using the config Game.ini file.

CONFIGURATION SETUP

The configuration for RCON is set through the Game.ini file; here is an example of the available configuration settings.

```
[/Script/TheIsle.TIGameSession]
bRconEnabled=true
RconPassword=Password123
RconPort=1000
```

RconEnabled enables/disables the RCON.

RconPassword sets the password used for authentication.

RconPort sets the port RCON will use.

COMMAND LIST

- Announce – Announces a message on the server and is displayed to all players.
- Update Playables – Updates the current available playable classes.
- Get Player List – Returns a list of all players as a string.
- Kick Player – Kicks a player by player id.
- Ban player – Bans a player by player id.
- Save – Saves all game data.
- Toggle Whitelist - Turns the server whitelist on/off
- Add Whitelist IDs - Adds player id to the server whitelist
- Remove Whitelist IDs - Removes player ids from the server whitelist
- Direct Message - Send a message as an announcement to a player
- Get server details - Retrieves all the current server settings.
- Update playables - Modifies the playable classes.
- Get player data - Retrieves some info about each player like location, character stats etc..
- Toggle global chat - Turns global chat on/off

- Toggle humans - Turns humans on/off
- Toggle AI - Turns AI spawns on/off
- Disable AI classes - Updates the allowable AI spawn list.
- AI Density - Adjusts the AI spawn density
- Wipe Corpses - Wipes corpses
